- » Policy management
- » Insurance rating
- » Claims processing
- » Healthcare eligibility and pricing
- » Pharma clinical trials

Overview

With Author Studio™, subject matter experts can author and edit business rules quickly and easily. Its intuitive web interface allows for agile updates to business logic without the need for code. Instead, updates to logic can be made using a variety of methods, including business language and decision tables. In addition, users can leverage InRule®'s unique vocabulary feature—further accelerating decision automation.

While business teams will embrace Author Studio for access to powerful authoring tools and instant access to updated features from a web browser, more advanced users and developers can continue to leverage InRule's robust authoring tool, irAuthor®, for initial set up of rule applications. InRule's powerful irCatalog® creates a natural bridge between these two environments.

Deliver Decision Automation with Unparalleled Speed with Nothing to Install

Author Studio works seamlessly with a customer's existing infrastructure. It can be accessed securely at any time, from any location with an internet connection. Every step of decision development—for author, developer, or stakeholder—follows the same principle of accessibility. For example, this focus on ease of use extends to the powerful decision table editor, which makes editing decision execution order as simple as reordering a playlist.

Respond Faster, from Anywhere

Author Studio delivers exceptional speed and efficiency for business and technical users who want to navigate large, complex decisions at the rate of business. With its full vocabulary support for easier continuity and collaboration, and decision table filtering for unprecedented transparency and collaboration Author Studio allows users to respond to market and regulatory changes in real time. Its host of ease-of-use features work seamlessly with a customer's existing infrastructure—and because users can access Author Studio from anywhere, making simple business logic updates is straightforward, safe, and secure.

Delight More Customers, Faster

With the InRule Decision Platform, organizations can take advantage of enterprise features designed to deliver automated decisions that can be authored anywhere and executed everywhere.

Companies around the world use InRule technology to boost renewals, reduce defaults, increase first quote effectiveness, reduce exceptions and capture more share of wallet. Our author-first approach enables both technical and business authors to write and manage the automated decisions that drive mission critical business—without the need for code.

Deliver faster change cycles with reduced maintenance and support effort

Enable teams to change business logic without having to redeploy the applications that rely on it. An intuitive UI guides business users through the authoring experience, freeing technical resources to focus in other areas—while built-in guardrails ensure users can make smart decisions, safely.

Confidence and compliance with check-in validation

With Author Studio’s validate on check in feature, business users and developers can be confident that the checked in rules will execute error-free and as intended.

Reduce risk and increase transparency

With the InRule Decision Platform, users can check decision logic and get explainable results – without the need to maintain a separate test environment.

Secure

InRule’s security practices have been vetted by independent auditors and are constantly monitored to ensure the highest standards of precision and efficiency. In our SOC 2 report we include a table mapping the controls to ISO 27001 Annex A controls.

Give your team the tools needed to respond quickly to market changes... and to do it from anywhere. Contact us today to learn more about Author Studio.
