

Simplify Retirement and Pension Logic and Calculations Management

InRule Technology®'s cloud-based decision platform allows technical and non-technical users to manage the logic used to calculate eligibility, benefits and interest related to retirement and pension programs.

The rules and calculations that govern pension eligibility and allocations are complex, and change as laws and mandates evolve. InRule® enables subject matter experts to manage the logic that dictates eligibility and allocations.

Allowing non-technical users to write and modify pensions and benefit-related logic streamlines the process of rule changes and allows IT to focus on more technical initiatives. In addition, by separating the logic from application code, InRule makes it easy to locate specific calculations to be modified or view which rules are in use at a given time to ensure compliance with regulations.

Provide Self-Service

By deploying InRule, state governments can provide employees with 24/7 access to records and empower them to complete other self-service tasks online, such as accessing forms, requesting information or updating personal information.

Integrations

InRule integrates with some of the most widely deployed technologies, including Microsoft Dynamics 365, Microsoft Azure, Salesforce and more. Additionally, with a rich

SDK, InRule can be customized to fit into other applications and environments—supporting a wide range of unique and complex requirements.

About InRule

InRule Technology® enables enterprises to understand and automate decisions with unparalleled speed, agility, accuracy and transparency. IT and business personnel rely on InRule's decision platform, including its Business Rule Management System (BRMS), to increase productivity, grow revenues and enhance customer service. With its 'author first' approach, InRule empowers both technical and business rule authors to write and manage rules. From on-premises, to the cloud and via mobile, InRule allows organizations to run rules anywhere for extreme flexibility and scalability.

More than 500 InRule User Community members depend on InRule to reduce development and change cycles by 90 percent for their mission critical systems and customer-facing applications. InRule has been delivering measurable business and IT results in high-performance environments since 2002.
